E-commerce Redesign

Enhancement

Web User Settings for Product Pages (Add to Cart)

Previously, we allowed you to select the product pages the Add to Cart option to displayed on (Tiles, List, Both or Neither). Now the View Add to Cart field defaults to Both (List and Tiles) and cannot be modified. With this change, when Allow Quote and/or Allow Order are selected, the Add to Cart will be available on both the List and Tiles views.

- The Add to Cart is always available on the Product Details page.

Enhancement

E-commerce Default Controls for Page Display Product Related Screens

The Products (Details View) screen has been modified and the following fields have a fixed position on the E-commerce Product Detail page: Product ID, Product Description, Product Image, Sell Price, Product Publishing Short Description, List Price and Product Description 2. You can disable the display of the List Price and/or Product Description 2 fields only; the other fields cannot be modified.

- All of the remaining fields on the Products (Details View) screen function as per normal.

For design purposes, the fields on the Products (List View) and Products (Tiles View) have been pre-selected and sorted. Both views are now query only and cannot be modified. This ensures a consistent display of product information on the e-commerce website.

Enhancement

E-commerce Defaults for Product Search

The search options group box which includes exact phrase, synonyms, pattern, and so on, has been removed from the Product Search tab,. E-commerce now uses only the Search All methodology.
