

Visual Streamline FAQ

How does the 'Get Cheque Number' screen work?

When cheques do not print correctly, answer No below.

This screen displays.

This tells the system where you start printing – meaning what cheque number do you physically have that you want it to start on next? This assumes some cheque have been ruined, so you need to enter the NEXT good unprinted cheque that you have.

This tells the system what to reprint. If you want to reprint the ENTIRE run, leave this set to the default (do not change). If you only want to reprint certain cheques, then you need enter the number of LAST cheque that printed correctly.
